**A simple system that everyone can use**

# Antares Services Manager

**Antares** is a systemic solution providing innovative philosophy, methods and tools that redefines the way we are building the business and the way we use computing. The Antares system is simple, easy to use, and everyone in the care industry can understand it. It coordinates the care specified for each individual client.

Antares' simplicity and beautiful design allow us to build every project as an independent small business centre. Each centre operates using the same tools (processes) but is configured following their own requirements (expressed as a Business Model). The reports from Business Centres combined together give the view of the operation across the entire organisation. The organisation can add additional Business Centres built from the beginning, or acquired, without affecting performance of the other projects.

Organisations design the Business Model using techniques provided by best practice and current business science.

## Two ways to use Antares:

- ☒ Antares "Business Savvy! - Computing Smart!" formula is used by industry leaders to rebuild their business and achieve their leading-edge goals.
- ☒ Antares computer program components can be used to improve the efficiency of the organisation's workflow.

## Benefits for all users

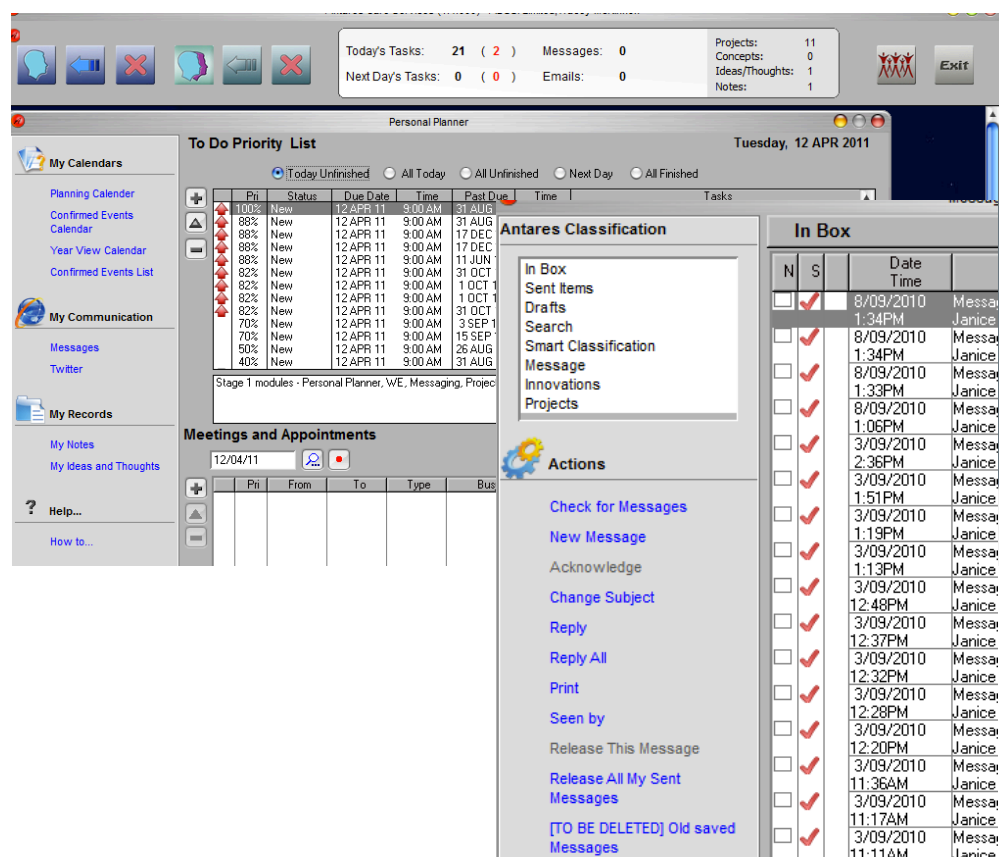

- For CEO :** improved productivity, sustainability, profitability
- For CFO:** introduced Real-time Budget vs Actual coordination and communication at the point of care
- For Managers:** improved quality of service (Do more for less, Accreditation, Client Satisfaction)
- For Care Delivery:** improved coordination and communication at the point of care

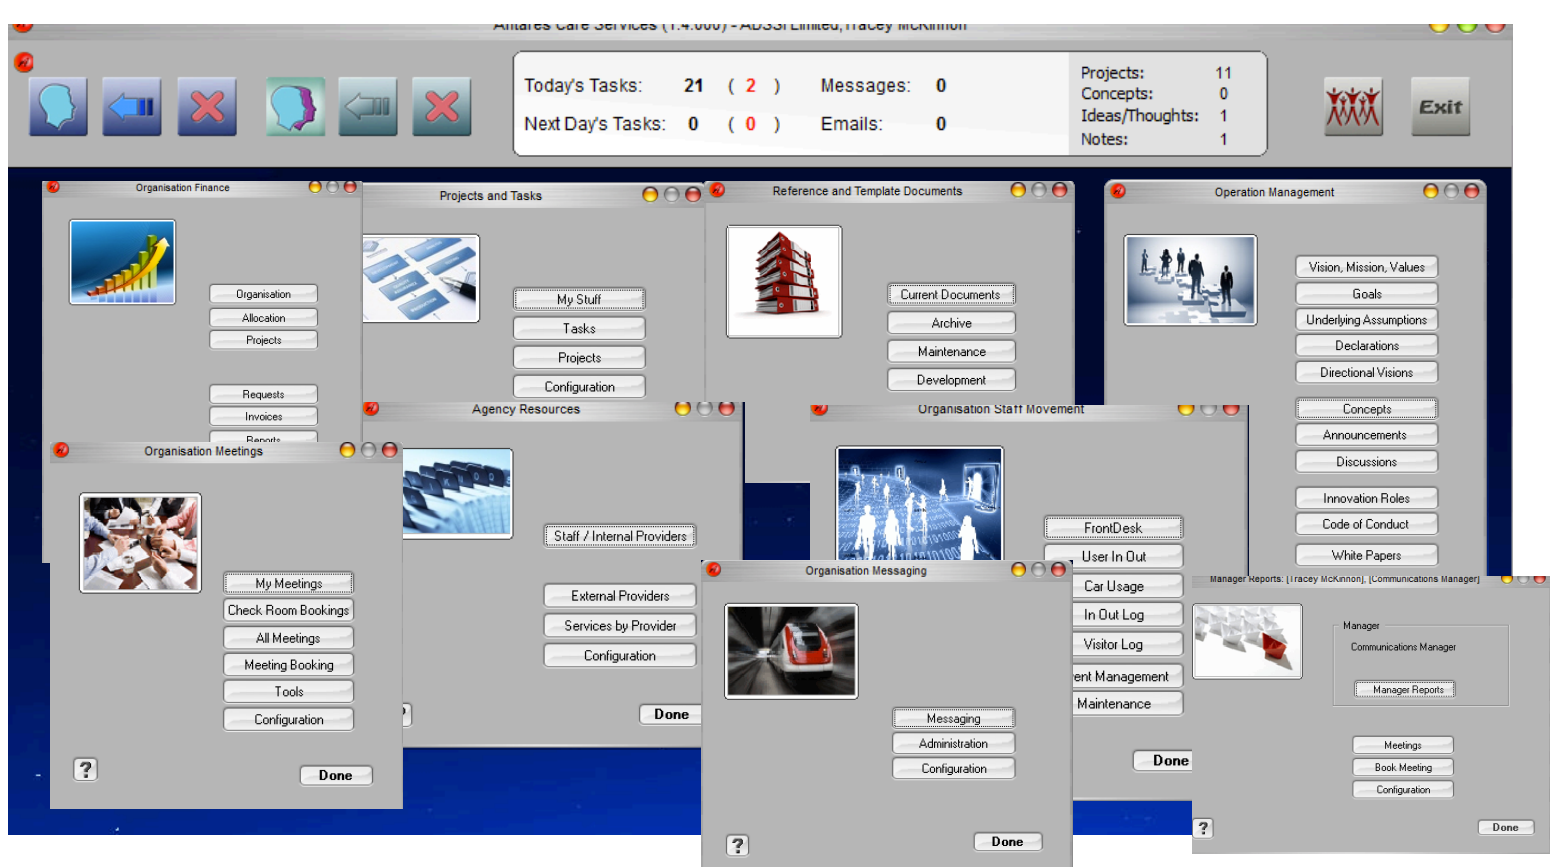

## Operation Cost

Antares allows an organisation to replicate its developed Business Model for each project across its existing operations. This results in a 40% reduction in the organisation's current operating costs.

## Key Features

- ☒ Dynamic Care Plans
- ☒ Small Contracts
- ☒ Continuous Quality Improvement
- ☒ Real Time Budget vs Actual

## Antares Aims...

to achieve a number of ambitious outcomes for the Community Care service...

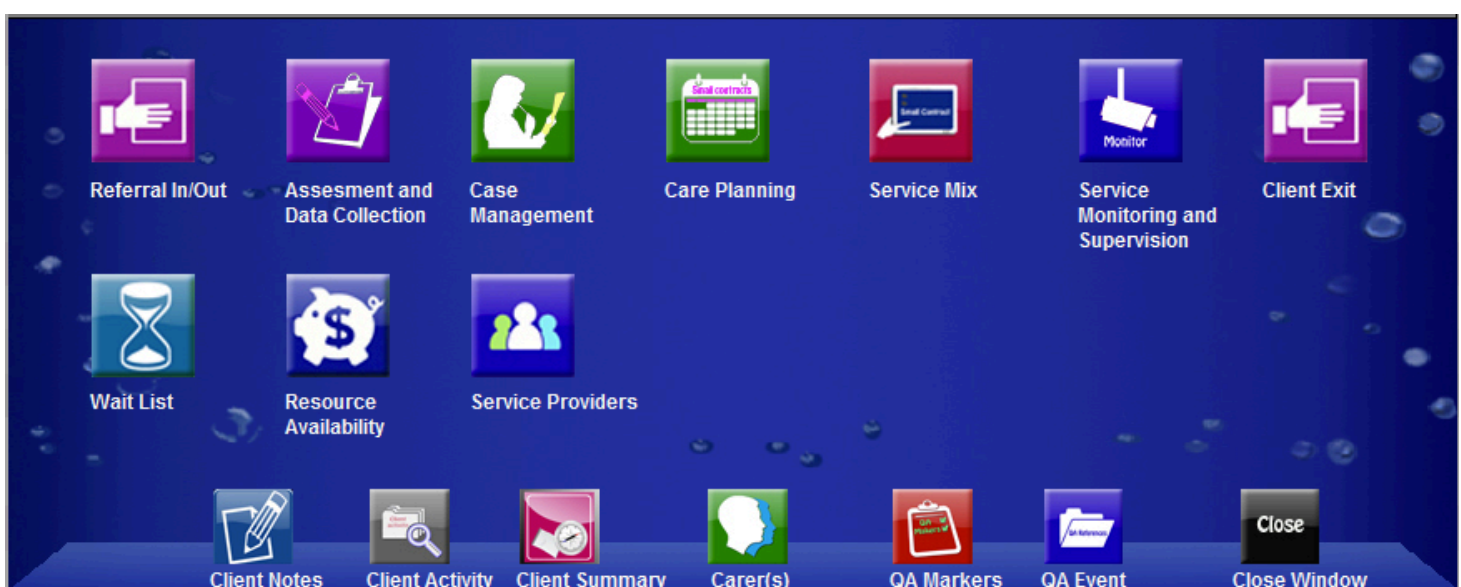

- ☒ A dramatic increase in efficiency of its care operation with a focus on quality of service delivery.
- ☒ A reduction in the cost of its service delivery by identifying and automating repetitive tasks and delivering them by using algorithmic processes.
- ☒ Introduction of a sustainable business model of the community care organisation which uses a combination of holistic and algorithmic processes.

## Antares Training

The advances in technology that Antares is built upon require a new mindset in business design. Training in Antares principles and methods is needed for care delivery staff to be at ease using the Antares system. Our specialised training allows users to achieve optimum business performance.

## Antares X-Factor

- ☒ Matches supply with demand,
- ☒ Realises superior economies of scale and
- ☒ Uses creative capacity much more efficiently,
- ☒ Delivers computing for a fraction of what it costs when it is used as a product.
